
tr F / tr H = 2.0%
median F_ii/h_i = 0.007
curvature / gradient variance
direction (sorted by curvature)
Fisher F_ii (held-out)
Hessian eigenvalue h_i

λ = 6,016
κ predicted 70.6
(measured 49 ± 2)
accumulated coefficient per ln n
number of directions included
Bayes (Laplace): ½ per resolved direction
plug-in: ½ Σ F_ii / h_i
